Insider Tips To Make Your Business Run Faster, Easier And More Profitably

WORRIED ABOUT AI THREATS?

**HERE'S WHAT'S
ACTUALLY WORTH
WORRYING ABOUT**

AI is rapidly advancing – and bringing with it a whole new way to do business. While it's exciting to see, it can also be alarming when you consider that attackers have just as much access to AI tools as you do. Here are a few monsters lurking in the dark that we want to shine the light on.

Doppelgängers In Your Video Chats – Watch Out For Deepfakes

AI-generated deepfakes have become scarily accurate, and threat actors are using that to their advantage in social engineering attacks against businesses.

For example, there was a recent incident observed by a security vendor where an

employee of a cryptocurrency foundation joined a Zoom meeting with several deepfakes of known senior leadership within their company. The deepfakes told the employee to download a Zoom extension to access the Zoom microphone, paving the way for a North Korean intrusion.

Creepy Crawlies In Your Inbox – Stay Wary Of Phishing E- mails

Phishing e-mails have been a problem for years, but now that attackers can use AI to write e-mails for them, most of the obvious tells of a suspicious e-mail, like bad grammar or spelling errors, aren't a good way to spot them anymore.

Threat actors are also integrating AI tools

into their phishing kits as a way to take landing pages or e-mails and translate them into other languages. This can help threat actors scale their phishing campaigns.

However, many of the same security measures still apply to AI-generated phishing content. Extra defenses like multifactor authentication (MFA) make it much harder for attackers to get through, since they're unlikely also to have access to an external device like your cell phone.

Security awareness training is still beneficial for reducing employee risk and teaching them to look for other red-flag indicators, such as messages that express urgency.

Skeleton AI Tools – More Malicious Software Than Substance

Attackers are riding on the popularity of AI as a way to trick people into downloading malware. We frequently see threat actors tailoring their lures and customizing their attacks to take advantage of popular current events or even seasonal fads like Black Friday.

So, attackers using things like malicious “AI video generator” websites or fake malware-laden AI tools doesn’t come as a surprise. In this case, fake AI “tools” are built with just enough legitimate software to make them look legitimate to the unsuspecting user – but underneath the surface, they’re chock-full of malware.

For instance, a TikTok account was reportedly posting videos of ways to install

“cracked software” to bypass licensing or activation requirements for apps like ChatGPT through a PowerShell command. But, in reality, the account was operating a malware distribution campaign, which was later exposed by researchers.

Security awareness training is key for businesses here too. A reliable way to protect your business is to ask your MSP to vet any new AI tools you’re interested in before you download them.

Ready To Chase The AI Ghosts Out Of Your Business?

AI threats don’t have to keep you up at night. From deepfakes to phishing to malicious “AI tools,” attackers are getting smarter, but the right defenses will keep your business one step ahead.

Protect your team from the scary side of AI ... before it becomes a real problem.

CARTOON OF THE MONTH

“It’s just a welcome mat. That doesn’t count.”

4 “MAGIC” STRATEGIES TO BECOMING A BUSINESS LEGEND

Former NBA player Earvin “Magic” Johnson Jr. is known for his strong work ethic.

Here are four strategies Magic used to build his empire that will help you achieve your goals and dreams in your business.

1. Refuse To Lose

When Magic left basketball for business, many assumed his fame made it easy. The truth was different. He struggled, made mistakes and faced rejection. “I could get the meetings,” he said, “but people didn’t take me seriously.” He used his own money at first, but when he sought outside funding for growth, banks turned him down for three years.

Eventually, he secured a loan and invested wisely, launching his career to the next level. Ironically, the banks that once rejected him now seek his business and he often declines. Magic’s takeaway: success isn’t about name recognition; it’s about showing a solid strategy, clear ROI and value creation.

2. Rivals Make You Better

Magic’s rivalry with Larry Bird is one of basketball’s most famous. “I disliked the Celtics and Larry because you have to in order to beat them,” he said. But Bird’s relentless work ethic pushed Magic to match him. “I knew Larry was taking 1,000 shots a day, so I had to take 1,000 shots a day. He got better, so I had to get better.”

The same applies to business. Competitors force you to sharpen your skills, innovate and work harder. They can keep you awake at night but that pressure can elevate your performance.

3. Elevate Your Game

“It takes the same amount of time to do a million-dollar deal as a billion-dollar deal,” Magic often says. For him, every opportunity must align with his brand, values and long-term goals. He uses a clear set of criteria: if a deal doesn’t check enough boxes, it isn’t worth pursuing.

Aligned values, shared revenue goals and a commitment to giving back are his markers for success. He teaches that clarity on what fits your company ensures stronger partnerships and sustainable growth.

4. Don’t Let Good Enough Be Enough

Magic believes in constant evaluation and improvement. Every new business begins with a SWOT analysis (Strengths, Weaknesses, Opportunities, Threats). He doesn’t stop there—he runs SWOTs on his executive team and even on himself.

“I want to be a better man, husband, father, grandfather and CEO,” he said. He constantly asks, “Can this team take me where I want to go tomorrow?” That mindset ensures that both he and his businesses are always evolving, never settling.

The Bigger Picture

Magic Johnson’s transition from NBA superstar to successful entrepreneur was not smooth or guaranteed. He faced rejection, adapted and pushed himself the way he once did on the court. His story is a reminder that perseverance, competition, discipline and self-reflection can help anyone elevate their game—whether in sports, business or life.

HOLIDAY REFERRAL CHEER!

This holiday season, your referrals could turn into cash up to \$2,500!

Here's how it works:

For every qualified referral who signs on for BVI IT & Cybersecurity Services, you'll earn one raffle ticket for a chance to win up to \$2,500 on top of your normal referral fees!

How to Qualify:

Send a warm email introduction to:
thuske@bvinfo.net
CC: marketing@bvinfo.net

Use the subject line: "Holiday Referral Cheer"

The referral must be an organization with 15+ users.

Raffle starts 10/17/2025
WINNER Announced
12/23/2025

For More Information
www.bvinfo.net | questions@bvinfo.net

Remember:

- The referral must be an organization with 15+ users.
- The more referrals you send, the more raffle entries you earn and the higher your chance to win!

 More Referrals = More Rewards = A Merrier Holiday Season!

Don't wait, start spreading the cheer today and wrap up the year with an extra \$2,500 in your pocket!
